

## Website Design

The TNT Creative Website development process involves a combination of business, art and technical skills including planning, programming, drawing, organizing and marketing. As design specialists, we offer individuals, small businesses and non-profits innovative and dynamic ways to market their brand by using cutting edge technology, stunning graphics and modern Web 2.0 features.

By using innovative open source content management systems such as Joomla! and Wordpress, we balance the requirements of your company with the cutting edge technology needed to improve your overall market position. Website Design Packages

- The Basic Design Package is ideal for customers who are interested in converting their existing website to Joomla, or can work for customers who are interested in starting a website from scratch and need to establish their Web presence as quickly as possible. With the basic design package, we generally set up a customer's main sections, pages and features, then they copy and paste their existing content into the new Joomla installation. In some cases, depending on your amount of website content, we can include adding your content in the Basic Design Package.

- The Exclusive Design Package is ideal for customers who need a competitive advantage on the Internet with a robust website requiring specific web design elements such as online donations and e-commerce platforms. This package is also great for non-profit agencies who want a dynamic "turn key" site that's finished and ready to go out of the box. With the exclusive design package, we generally take care of all of the design and layout details while getting input from customers about the look and feel of their content. Complimentary Consultation

If you're interested in exploring a content management system for your organization, building a website or need any other marketing services, please drop us an email for a complimentary consultation at [info@tntcreative.com](mailto:info@tntcreative.com)
